

BAC PAC

Product Information Sheet

Product Description

The BAC PAC is a pre-measured biological product designed to provide a convenient and exceptional method of wastewater treatment and odor control. The BAC PAC contains multiple strains of selectively adapted microorganisms that provide accelerated digestion and actually out perform the naturally occurring and existing bacteria in wastewater effluent.

Use the BAC PAC in septic systems, grease traps, vault toilets, and pit toilets. The BAC PAC comes in pre-measured packets that are dissolvable. Just toss the BAC PAC into a toilet and flush or add directly to the system. What could be easier?

Product Specifications

Appearance: Dissolvable 2 oz. packet of tan colored powder. Earthy odor.

Bacterial Characteristics: Bacillus spore and vegetative strains. Salmonella and shigella free.

Count = 8.5×10^7 C.F.U. per ounce dry weight.

Storage and handling: Store in cool dry place. Do not get packets wet, as they will avoid excessive contact and inhalation. Read MSDS before using. Dissolve in the presence of moisture.

Shelf life: 2 years at 35-95 degrees Fahrenheit.

Product Applications

For restaurant wastewater streams, flush 1 BAC PAC down toilet each night at close of operation.

For vault and pit toilets, add 1 BAC PAC each week to control odors and accelerate waste degradation. May need to mix with water or add water if pit toilets are dry or infrequently used.

For residential systems, flush 1 BAC PAC down toilet once a month.

Applications are estimates. More or less may be required based on individual situations. Contact Bio Quest Environmental Products representative to determine specific product requirements.
